What is Slidev?

Slidev is a slides maker and presenter designed for developers, consist of the following features

-  **Text-based** - focus on the content with Markdown, and then style them later
-  **Themable** - theme can be shared and used with npm packages
-  **Developer Friendly** - code highlighting, live coding with autocompletion
-  **Interactive** - embedding Vue components to enhance your expressions
-  **Recording** - built-in recording and camera view
-  **Portable** - export into PDF, PNGs, or even a hostable SPA
-  **Hackable** - anything possible on a webpage

Code

Use code snippets and get the highlighting directly!

```
interface User {  
  id: number  
  firstName: string  
  lastName: string  
  role: string  
}  
  
function updateUser(id: number, update: Partial<User>)  
  const user = getUser(id)  
  const newUser = { ...user, ...update }  
  saveUser(id, newUser)  
}
```

Frankfurt theme

Definition 1

This is definition 1.

Theorem 1

Theorem 1

Let $A \subseteq \mathbb{N}$ be a set such that $\pi_A(x) = x/\delta + O(x^\alpha)$, where $\delta \in [1, \infty)$ and $0 \leq \alpha < 1$. Then we have

$$M_A(x) = \frac{1}{2\delta} x \log x + \frac{1}{\delta} \left(\gamma - \frac{1}{2} \log \frac{\delta}{2} - \frac{1}{2} \right) x + O_A \left(x^{\frac{2\alpha+2}{\alpha+3}} \right).$$

Theorem 2

Theorem 2

Let $A \subseteq \mathbb{N}$ be a set such that, for some $\delta > 0$,

$$\pi_A(x) = \frac{x}{\delta \log x} \left(1 + \frac{1}{\log x} + O\left(\frac{1}{\log^2 x}\right) \right)$$

for all sufficiently large x . Then we have, for sufficiently large x ,

$$\begin{aligned} M_A(x) = & \frac{\log 2}{\delta} x - \frac{1}{\delta} \frac{x \log \log x}{\log x} + \frac{1}{\delta} \left(\gamma - \log \frac{\delta}{4} \right) \frac{x \log \log x}{\log x} \\ & + \frac{1}{2\delta} \frac{x (\log \log x)^2}{\log^2 x} + O_A \left(\frac{x \log \log x}{\log^2 x} \right). \end{aligned}$$
